

EDUCATION

Seattle, WA 3.9 GPA (Phi Beta Kappa, Dean's List) <ul style="list-style-type: none">B.S. in Computer Science (direct admission) and Mathematics (double major)Upcoming Courses: Real analysis; abstract algebra; topologyPast Coursework: Computer Networks; Distributed Systems; Operating Systems; Database Systems (grad); Theory of Computation; Compiler Construction; Computer Vision; Algorithms; FPGA ProgrammingInterest: Systems-programming (databases, distributed systems, operating systems).	University of Washington	Fall 2016 – Spring 2020
---	---------------------------------	--------------------------------

EXPERIENCE

Software Engineer Intern <ul style="list-style-type: none">Creating and integrating a proxy fuzzer system for Cosmos DB in Azure Data.Adding authentication to every Cosmos DB request sent.	Microsoft	June 2019 – Present
--	------------------	----------------------------

Data Scientist Intern <ul style="list-style-type: none">Implemented a real-time statistical process control system for Microsoft devices, processing 200 gigabytes of data per day, with Azure and .NET tools – the first usage of real-time analytics within Microsoft devices manufacturing.Will be used to improve quality, avoid excess costs, and find root causes during quality failures significantly faster.	Microsoft	June 2018 – September 2018
---	------------------	-----------------------------------

Chair <ul style="list-style-type: none">Elected to be the external face of ACM and represent over 1,200 CSE students.Coordinating with the school and industry affiliates.	Association for Computing Machinery	September 2016 – June 2019
--	--	-----------------------------------

Teaching Assistant <ul style="list-style-type: none">Head Grader for Software Design and Implementation (CSE 331).Taught a section of 20-25 students and answered content-related questions on forums.Graded theory-based code reasoning and project-based assignments.Held office hours for homework help and course questions.	University of Washington	March 2017 – August 2017
--	---------------------------------	---------------------------------

PROJECTS

- Torgo** (June 2019): Anonymous overlay network based on the Tor protocol. Routes traffic from a browser through a randomized circuit of Tor routers before sending it to the web server. Other Tor routers are found using a peer discovery registration service. Can run (for multiple days or longer) in a heterogeneous environment without resource leaks or deadlock. Wrote around 1.5k lines of code in Golang.
- Distributed Database System** (June 2019): A linearizable, Paxos replicated, sharded key-value store with multi-key updates and dynamic load balancing, similar in functionality to Amazon's DynamoDB or Google's Spanner.
- Operating System** (March 2019): Created a working operating system in C that can run multiple processes efficiently and store file data reliably. Based on the Experimental Kernel (XK).
- Java to x86-64 Compiler** (June 2018): Uses JFlex (lexical analyzer generator) and CUP (LALR parser generator) to generate a scanner and parser using context-free grammars, then transforms the program into an AST for static semantics checking, type checking, and symbol table generation via the visitor pattern. Finally, generates x86-64 code based on the AST which can be run.
- SimpleDB** (March 2018): A relational database management system in Java that handles queries (joins, aggregate functions, selections, etc.), ACID transactions, and a steal/no-force crash recovery (with a write-ahead redo/undo log + non-quiescent checkpoints). It can run in parallel or as a distributed system across multiple machines.

RESEARCH EXPERIENCE

Undergraduate Assistant <ul style="list-style-type: none">Developing a cost model for LightDB, a database system for virtual and augmented reality content at scale.	UW Database Group	Spring 2018
---	--------------------------	--------------------

Undergraduate Assistant <ul style="list-style-type: none">Worked with Dr. Anat Caspi and Nick Bolton to Developed a tutorial module for the OpenSidewalks Project in Unity.	Taskar Center for Accessible Technology	Autumn 2016 – Winter 2017
--	--	----------------------------------
